In the Fu Jen Catholic University Physics Department, education and research is primarily aimed at optical development, with specialized courses in optical thin films and vacuum coating technology among others. As many technological products require vacuum coating applications for surface treatment, by combining the cultivation of professional industry talents with the objectives of our department's education and research, and focusing on the development of optics, we have integrated the resources of our department to plan and design the specialized curriculum of the 'INTENSE Vacuum Coating Technology Talent Cultivation Program.'

This program matches students with existing faculty leading in vacuum coating and optical design techniques to help them master vacuum coating and optical thin film technology: by emphasizing hands-on film instrument teaching, it cultivates the optical technology capabilities needed by the industry, trains students to solve industrial problems, and enhances the ability of industrial optical technology. Additionally, it offers students the opportunity to participate in internships within the industry to develop practical skills, simultaneously teaching master's and doctoral students to think and solve problems independently and strengthening cooperation with the industry.

The specialized courses offered by this program mainly include specialties such as vacuum coating, design of optical thin films, and applied optics, utilizing multi-layer optical thin film structures for film thickness, methods of film deposition, and film characteristics, to adjust the properties of incident light and produce optical signal filtering characteristics. Potential applications include smartphone lenses, space lenses, semiconductor processes, contact lens design, and optical communication in various popular fields. Students must focus on the practical operation of various coating machines and study various aspects such as substrate cleaning, film deposition, spectral measurement, and optical parameter measurement of films. After finishing this program, the professional coating and applied optics skills learned by students will make for a great match with the demand of the technology industry.
